### **DETAILED ACTION**

1. This office action is in response to the amendment of December 24, 2008.
2. The examiner acknowledges the amendments to claims 1 and 7. The examiner notes that per the examiner's suggestion in the office action of October 2, 2008, new claim 14 has been introduced. The examiner also notes the introduction of claims 14-21.

### **EXAMINER'S AMENDMENT**

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone message for the examiner on January 28, 2009 pursuant to an interview with Mathew Kremer, reg. 58,671, on January 27, 2009.

4. In reviewing the instant application as amended, it was discovered that claim 9 contained limitations directed toward an embodiment which the claim it depended from was not directed toward. Claim 9 depends from claim 1 which is directed toward the embodiment of figure 3. In this embodiment, and as claimed in claim 1, an interconnecting link is rotatably mounted on to a driven member (4, 5) and disengageable from a drive member (10). The limitations of claim 9 include a link that includes plates stack on top of each other. This limitation is directed toward the embodiment of figure 8 and is illustrated in figure 9. In this embodiment, and as claimed in claim 14, an interconnecting link is rotatably mounted on to a drive member (10) and disengageable from a driven member (4). There is no embodiment in

Art Unit: 3746

which a link that includes plates stacked on top of one another is rotatably mounted on to a driven member and disengageable from a drive member. As such claim 9 has been canceled and the instant application is not in condition for allowance.

5. Claim 9 is cancelled.

***Allowable Subject Matter***

6. Claims 1, 5-8, 11-12, and 14-21 are allowed.

7. The following is an examiner's statement of reasons for allowance: the prior art fails to teach or suggest a power transmission for a compressor including a drive member interconnected with a driven member by a link that is disengageable from a drive member in a combination wherein the link has a hole at a first end portion and an open ended slot at a second end portion, the open ended slot at the second end portion releasably receives a first engagement member that is fixed to the drive member, and when disengaged from the first engagement member the link is slidably pressed against the driven member by a resilient locking member that is provided in the driven member. Further the prior art fails to teach or suggest a power transmission for a compressor including a drive member interconnected with a driven member by a link that is disengageable from a driven member in a combination wherein the link has a hole at a first end portion and an open ended slot at a second end portion, the open ended slot at the second end portion releasably receives a first engagement member that is fixed to the driven member, and when disengaged from the first engagement member the link is slidably pressed against the drive member by a resilient locking member that is provided in the drive member.

Art Unit: 3746

8. The specific aspect of the instant invention of a resilient locking member that is provided on the same component (either the drive member as shown in figure 3 or the driven member as shown in figure 8) that a link is rotatably mounted to in combination with the link having the specific structure of a hole at a first end and an opened slot at the opposite end portion that disengages from an engagement member that is fixed to the component that is not provided with a resilient locking member and which the link is not rotatably mounted to provides the basis for allowance. The prior art of Skrobisch US 4,825,992, teaches a resilient member that is on the opposite component of which a link is mounted to. The prior art of Kimura EP 1197672 teaches a link is rotatably mounted onto a drive member and which broadly teaches a hole at a first end and an open ended slot at an opposite end that is disengageable from an engagement member that is fixed on to a driven member. Kimura fails to teach a resilient locking member provided on a drive member (or more broadly the component which a link is rotatably mounted to) that causes a link to slidably press against the drive member which is same component the link is rotatably mounted to. The prior art of Hatakeyama US 5,944,156 fails to teach a link that is rotatably mounted to either of a drive or driven member. Finally Kojiro JP 03-228595 teaches clutch mechanism for sheet metal cutting device that teach the general structure of a link between a drive member and driven member having a hole at one end and an open ended slot at the other end that disengageable receives an engagement member on a driving arm. Even with a modification wherein the link of Kojiro were substituted for the links in Skrobisch, Kimura, and Hatakeyama, none of the combinations would teach a separate resilient locking member that is

Art Unit: 3746

provided on the component a link is rotatably mounted to and causes the link to slidably press against the same component.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
